

Mad Max Memecoin

Deployed on September 16, 2024 v1.02

on KASPA KRC-20 Token

The memecoin to put all your madness into.

Ticker: \$MADMAX

Initial & Total supply: 88 888 888

...

Historically one of the first fair launch
Memecoin with dump protection!

Max is Mad about all VC shitcoin dump exit liquidity and sniper bot memecoin pump and dump and millions of worthless fake tickers. Max's furious revenge is here. Are you enough mad of having been rug pulled? Mad of having missed out because of high minting fees, wallet bugs. Mad that 100% of token minting costs goes to miners who dump \$Kas price the minute of KRC-20 launch. They don't care about our tokens. Let the past be, forgive and put your Madness into \$Madmax! Let's take the token generation funds back into our hands.

Fair Launch procedure & tokenomics:

64% 56'888'888 Tokens on Sale for everybody

20% 17'777'777 tokens for Liquidity Pools

10% 8'888'888 tokens to be minted by everyone (80'000'000 premint for tokenomics)

We give miners their part, because we are mad but fair.

5% 4'444'444 tokens for Airdrops for fans, Meme designers and followers

1% 888'888 tokens for Madmax' hard work with sales, airdrops, LP management, fees.

This is the only unfair part of this memecoin. It's way to low of management allocation.

....

How to get \$MADMAX Memecoins:

1) Sales: 56'888'888 tokens on Marketplace

use this referral link: https://t.me/kspr_home_bot?start=PS8u4w

Mad raising price levels: until everything is sold.

90% of Sales income will be used to support the price of \$Madmax!

Madmax is a Memecoin with real dump protection according to Mambo's protocol.

A long term investment with Billion potential.

2) Public Minting: 8'888'888 Tokens.

101010 Mints: 88 Tokens per Mint

Costs: min. 1 KAS Minting Fees per Mint of 88 Tokens goes to Miners.

(just found accidentally: The angel number 101010 is known to mean *that the suffering and hard times you have been struggling with are about to end, it's binary 42.*)

Attention: Minting is 10x more expensive at lowest fees (1kas per mint) then to buy tokens on Marketplace.

You get for 1 Kas up to 880 \$Madmax on Marketplace!

The fact that it costs 1 kas to mint does not make the tokens minted backed buy any funds.

Miners proofed on September 15, 2024, that they just dump the extra income form minting fees.

They do not at all care about our memecoin.

Max's opinion and Mambo's vision: Minting looks fair and is fair, but gives money to miners.

Mambo's Fair Launch Approach brings money back to \$Madmax Memecoin

to support the price and helps to create a growing up price range. Thats more than only fair.

Airdrops: Get \$MADMAX for free:

Total Airdrop Pool 4'444'444 Madmax

Conditions to get an airdrop:

Free Airdrop 1:

1000 Madmax for 500 individual fans, first come first serve:

You join us on

Telegram: 1) t.me/MadMaxMeme and 2) t.me/krc20coins

Follow X 3) [@Mambocoins](https://twitter.com/Mambocoins) and 4) [@MadMaxMeme](https://twitter.com/MadMaxMeme) retweet!

That means total 4 groups/ accounts.

How to navigate in KASPA

Mint KRC-20 Tokens - Trade sell and buy on Marketplace:

which wallet to use?

At the moment you should use

https://t.me/kspr_home_bot?start=PS8u4w watch instructional vids on how to use kspr telegram bot wallet. It's easy . youtube.com/@mambo_coins or cryptopumpz

The Ksper bot team will soon launch a browser extn. Wallet.

Or use updated Kasware wallet - but for Marketplace you must use kspr.

What you must know if you are new to Kaspa and KRC-20 Tokens!

KRC-20 Tokens are quite different to tokens of most other blockchains!

-
- The token ticker is unique - there can be only one "Pepe" token ticker. You don't need the token address. The Ticker is enough to find it. No fake same name tokens
- There will be a run for the best token names just like for domain names, because they are unique.
- But it costs 1000 Kas fees (going to miners) to deploy a token. Be careful with the tokenomics. If you plan to launch a token, do not tell the ticker in advance, it can be taken by others.
- If the creator of a token allocated a part or even 100% for minting, you can mint the token.
- On kasbay.org/tools you can click on the ticker and see how much you get for 1 mint.
- 1 mint costs minimum 1 Kas, this goes to miners, not to the creator or for liquidity of the token
- There is although some gas fee to pay, normally this is very low. But with high demand on an opening event, the gas fees can go up.
- At the moment - September 16, 2024, there is NO DEX for swapping or trading the tokens.
