$Banana Paper

$Banana is one of the the craziest memecoins on Kaspa KRC-20 protocol.

$BANANA is a community token. Widespread retail grassroot distribution at best price possible. Whales welcome.

Sales price update!

The best way to ape $BANANA - 50000x+ potential

$Banana math - initial sales prices, will go up rapidly over time:

OTC Sales: 100 Kas get 385,000,000 $BANANA's
Marketplace: 105 Kas get 385,000,000 $Banana
Minting: 100 mints gets 7,700 $Banana. That's 1000x less tokens!

Attention: The OTC and Marketplace price will go up constantly, that means you will get less $Banana for the Kas you invest the longer you wait. **But we may offer in limited time frames a far better price as special discount actions, specially in Mambostan land.**

Minting $Bananas becomes interesting, once most preminted $Bananas are sold or put in Swaps, Dexes and Cexes or unsold tokens are burned and price up 100x of initial OTC price.

$Apes doing the $Banana math will buy it from OTC and Marketplace of course. Humans may lack dyor or ape brain levels.

$Banana is narrowly connected to $APES . You can get $Apes the most cheap way by buying it with $Banana on special $Apes-$Banana OTC swap sales occasions - coming later.

90% of the sales funds are used for the support of the $Banana price and liquidity. It's our/your funds you spent on OTC for the swap that backs the price.

The OTC/Marketplace funds wallet is the treasury of all the $Banana apers. Simple and transparent.

We will not give any single free $Banana to a CEX. They have to buy it from us, the $Banana $Apes community and early aping $Banana degens, on OTC, Marketplace or a Swap, like all of us have to do.

Where and how o buy?

OTC Sales Form: Sales posts on t.me/MadMaxMeme

Kroc bot Marketplace: https://t.me/delta_krocbot?start=b7b6k59ox2v

Tokenomics

Total supply: 777,000,000,000 (777 Billion)

Premint: 444,000,000,000 (57,14%

Max per mint. 77

Mints possibe: 4,324,675,324

Token avaiable for minting: 333,000,000,000 (42.85%)

(4 ,3 Billion mints that 1/7 of Kaspas $Kas supply. As long as $Apes and humans eat $Banana, Kaspa miner will have fee rewards :-).)

Attention: we strongly recommend, Not to mint $Banana in the beginning phase. The OTC and Marketplace sales give up to 1000x more tokens for the same amount of investment.

Minting comes to place when all tokens are sold - or the unsold tokens are put to a much higher price (less tokens per kas) as to mint them - or the unsold tokens are proofable burned (send to dead wallets).

If you did not read this DYOR disclaimer, you cannot blame $Banana's creator for having been dumped you minted tokens by initial sales.

Tokenomics Details:

The preminted tokens are used for:

Airdrops, Rewards: 1%: 7,770,000,000
Token Managment: 1%: 7,770,000,000
Liquidity Pool (Swap, Dex) 15%: 116,550,000,000

Sales, Marketplace 40.15%: 311,910,000,000
Minting 42.85%: 333,000,000,000
Total Supply 100%: 777,000,000,000

$Apes Math and Wisdom

How to ape best way into $BANANA:

1. You get the best price aping in early and buying $BANA on the OTC.

2. You get second best price buying it on kspr or kroc Marketplace and coming swaps or dexes.

3. $Apes strongly recommend not to mint until all is sold or the rest is burned.

Minting gets you up to 1000x less tokens for the spend Kas.

This gives $BANANA an initial 1000x potential - and then the Mining acts as a sales wall, until all 4,3 Billion mints are outminted.

Unsold tokens offered
At 2000x-100000x or
burned. $Banana Moon
